## THEOT Song of Songs, draft 16

Notes: In this study we separated columns in the dots and bars file based not just on shared root, but also on any morphologically meaningful variant which results in greater variation than studies in which we combine into one column all words sharing the same root. Further, this study included the text of all eighty manuscripts transcribed of the Song of Songs, but only for the strophes indicated in Gleave's edition to be part of the common Ethiopic edition. Therefore, it will be important to explore to what degree copies of the Old Giyorgis and Hebraic editions may have added words in strophes of the common edition beyond the additional strophes to be analyzed in Study Two of the Song of Songs. If so, that would impact the dendrogram below, perhaps to a degree that the study needs to be executed on only those manuscripts that carry the common edition.
